Samsung phone systems have been at the core of our businesses growth, and that's the bottom line.

Add a New Dimension to Your

A telephone system should be a key asset to your business. The DCS Compact provides you with the power to handle any task and the flexibility to accommodate your future growth.

DCS Compact – A System Designed Around Your Needs

A System that Grows
with Your Business

Samsung's DCS Compact delivers desktop station control and flexibility to simplify your phone operations and help you manage them more efficiently. The DCS Compact can interface readily with personal computers to multiply communications power a hundred times over.

The DCS Compact offers built-in adaptability for future upgrades at affordable costs – so your phone system can grow as fast as your business.

DSP – The Power Behind DCS

A Powerful Surge
of Adrenaline for
Your Business

Digital Signal Processing (DSP) is the high-performance power source behind the DCS Compact. This breakthrough technology takes fast and flexible to a whole new dimension. With DSP, we can add more features and deliver far greater reliability than would ever be possible with conventional phone systems. As the heart of the DCS Compact, Digital Signal Processing's high-speed performance makes other phone systems nearly obsolete.

The power of DSP helps make the DCS Compact the fastest, most flexible and most reliable phone system in the marketplace today. Our DSP technology allows the DCS Compact to handle every function with maximum efficiency and with the most cost

effectiveness, giving you a step up on the competition and another way to accelerate today's growth into tomorrow.

Super I® Switching Means Supercharged Performance

Greater Performance
with ISDN-like Speed

Super I® is Samsung's interface switching technology that lets the DCS Compact work at virtually the same speeds and performance levels as today's digital networks. It's not just fast, it's flexible.

With Super I®, you can add single line devices like fax machines, modems and cordless phones to a single digital extension or port. Plus, Super I® offers you

something no other system on the market can - simultaneous access to two separate voice channels on the same wires.

Twice the Flexibility - The Ultimate Multi-Tasking System

Double Your Company's
Efficiency

Most phone systems in the market provide you with access to only one channel. This is like using only half of everything that's available to you. Samsung's DCS Compact allows you to access two channels through a single extension port. This means you can do so much more, including carry-on two conversations or perform two phone functions at the same time. Super I®

technology doubles your resources, increases your effectiveness and allows you to grow your business twice as fast, thus bringing a new dimension to your bottom line.
